NDSR Weekly Epidemiological Report 06th

Date: 04 - 10 /02 - 2024

Summary:

- Out of 613 functional Surveillance sentinel sites, 613 (100%) have submitted reports this week.
- A total of 706,533 new consultations, of which 286,747 (40.6%) were due to Surveillance targeted diseases. That included 151,185 (52.7%) males and 135,562 (47.3%) females. Also, 131,503 (45.9%) people under five years old and 155,244 (54.1%) five years old and over were reported this week.
- The main causes of consultations this week were ARI Cough & Cold (203,393 = 28.8% cases out of total new consultations), Acute Diarrheal Diseases (33,913 = 4.8% cases out of total new consultations), and Pneumonia (43,053 = 6.1% cases out of total new consultations).
- A total of 376 deaths were reported this week, of which 108 (28.8%) deaths were due to surveillance-targeted diseases, which include 95 ARI Pneumonia deaths, 05 Suspected Meningitis/ Severely ill Child deaths, 03 Acute Viral Hepatitis deaths, 04 suspected Measles deaths and 01 COVID-19 death.
- In addition, during this week, 44 outbreaks were reported: 17 Clinical Scabies outbreaks were reported from Baghlan, Bamyan, Kabul, Kapisa, Kunar, Kunduz, Logar, Nangarhar, Panjshir, Parwan, Saripul, Takhar, Urozgan and Wardak provinces, 11 Clinical Chickenpox outbreaks were reported from Bamyan, Daykundi, Herat, Kabul and Saripul provinces, 09 suspected Measles outbreaks were reported form Badghis, Farah, Kabul, Paktika and Zabul provinces, 03 Clinical Mumps outbreaks were reported form Bamyan, Daykundi and Wardak provinces, 02 Dog bite/ suspected Rabies outbreaks were report from Baghlan and Helmand provinces, 01 Typhoid outbreak was reported from Helmand province and 01 Pink Eye outbreak was reported form Logar province.

Moreover, 222 COVID-19 confirmed cases and 1141 suspected Measles cases (IBS) were reported at the national level.

Figure 1: Surveillance/NDSR Sentinel Sites with GPS location by type of Health Facility, 2024

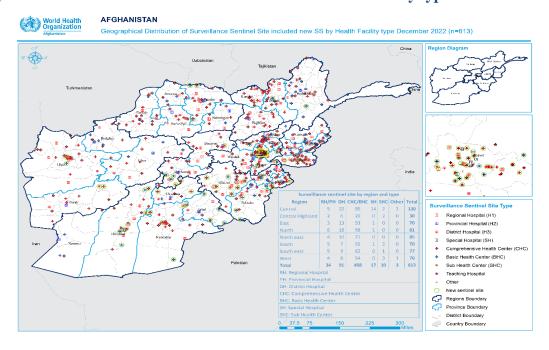

Table 1: Coverage of NDSR Surveillance System

Type of Health Facility	RH	РН	DH	СНС	внс	NH/ Special Hospital	SHC	Other	Total
Total Health Facilities (HF)	8	27	91	437	900	36	1,106	2,093	4,698
HF covered by NDSR-Plus	8	26	90	348	111	17	10	3	613

Indicator – based Surveillance (IBS):

The indicator-based surveillance component of the NDSR, reports 17 priority conditions/infectious diseases from sentinel sites on weekly basis. The data is compared with previous weeks and the corresponding weeks of the previous three years, and the alert and epidemic thresholds are checked to see if disease incidence has crossed these levels and necessary action is initiated.

Food Poisoning	1	0	12	0
Dengue Fever	1	1	38	0
Typhoid Fever	1	0	10	0
Grand Total	214	8	4766	13

Laboratory surveillance:

A total of **4312** specimens were collected and shipped to CPHL and other regional laboratories. Out of which **03** specimens were confirmed for AWD, **13** specimens were confirmed for Acute Viral Hepatitis and **110** specimens were confirmed for Measles, **02** specimens were confirmed for CCHF, **01** specimens were confirmed for Malaria (Follow-up by the CPHL is going on).

Influenza Surveillance activities:

In Epidemiological week 6th 2024, we have received reports from 10 out of 10 sentinel sites (Kabul, Kandahar, Balkh, Herat, Bamyan, Baghlan, Nangarhar, Kapisa, Paktia and Badakhshan). Out of all new hospital admissions, 1135 (18.6%) Severe Acute Respiratory Infections cases were reported and 65% were under 5 years old. The proportion of SARI cases were increased compared to week 5th 2024. 41 SARI-associated deaths were reported this week. At the 10 provincial levels, the top sentinel sites with the highest proportion of SARI cases were Kabul (48.0%), Kapisa (42.2%), and Badakhshan (37.0%) provinces. During this Epi-week, our field staff shipped 60 SARI and 40 ILI specimens to the National Influenza Center (NIC).

COVID-19 Surveillance activities:

This week, **2923** specimens were tested for suspected COVID-19. Out of which **222** specimens were confirmed for COVID-19 by RT-PCR.

- The COVID-19 case positivity rate was 7.6% this week, which decreased 1.0% compared to previous week.
- Out of **222 confirmed** cases, **272** contacts out of **77** were traced that were mostly family members, with an average of 4 contacts per case, and will be continued until 14 days after their last contact with the confirmed cases. Also, surveillance screening teams screened all the passengers at the points of entry for fever. In addition, health education was conducted for them. About **28,138** passengers have been screened for COVID-19 at the points of entry in two provinces (Kandahar and Nangarhar).

Challenges:

- Measles cases are still a public health concern in the country.
- Scabies cases are on increasing trend as a public health challenge due to unimproved lifestyle of the community.
- Chickenpox cases are on increasing trend, and it is recommended to provide its vaccine through the national EPI.
- Dog-bite cases are on increasing trend, and it is recommended to provide its control measure through the Zoonotic committee in national level.
- ARI cough and cold cases are on the increasing trend (0.7%) compared to the previous week.
- Pneumonia cases are on the same trend compared to the previous week.
- Diarrheal diseases are on the decreasing trend (0.1%) compared to the previous week.
- COVID-19 preventive and control measures should be strengthened.
- Vaccine preventable diseases (especially Measles and Pertussis vaccination and preventive measures) should be strengthened.
- The measles response strategy should be reviewed to respond to the current measles epidemic situation.
 - EPI: As the surveillance system detected 1234 (IBS+EBS) suspected Measles cases with 04 (IBS+EBS) deaths at the national level, further prevention and control measures should be conducted by the EPI team.
- The findings should be analyzed further at different levels, and appropriate actions should be taken by the concerned department.
